Available Finishes

A218 Our original proprietary surfboard finish was developed especially for use with polyester resin systems but works well with polyester or epoxy resins. A218 promotes a smoother, whiter glass surface for improved handling and clarity in the finished board.

504 Our "Retro" finish is known for being the best Volan in the industry and gives boards that vintage greenish tint that has never really gone out of style. Compatible with both polyester or epoxy resin systems, glassers depend on our 504 Volan finish to make their jobs easier and more efficient so they can build their quota and hit the surf by noon.
